

THE 36TH INTERNATIONAL CONFERENCE OF SAFETY IN MINES RESEARCH INSTITUTES

THE FUTURE OF MINING SAFETY RESEARCH

REGISTER NOW

OCTOBER 25-27, 2015
SUDBURY, CANADA

MARK CUTIFANI
Honorary Chair
Chief Executive
Anglo American

Topics

- Mining Safety Research
- Occupational Health and Safety Technology
- Mine Rescue
- Safety Management Systems
- Case Studies on Mining Disasters
- Diesel Emission Reduction
- Ergonomics
- Communication Technology
- Regulatory Approaches to Mining Health and Safety
- Technology and Management of Change
- New Approaches to Track Leading and Lagging Indicators
- Intrinsically Safety Design
- Ground Control/Rock Mechanics Instrumentation for Early Warning Systems
- Personal Protective Equipment Innovations
- Hazard Identification Methodology
- Occupational Health Hazards Underground
- Leadership in Mining Safety
- Contractor Safety

THE 36TH INTERNATIONAL CONFERENCE OF SAFETY IN MINES RESEARCH INSTITUTES THE FUTURE OF MINING SAFETY RESEARCH

The International Conference of Safety in Mines Research – A Rich History

The first International Conference of Safety in Mines Research Institutes was held in 1931 in Buxton in the UK. One of the oldest global mining health and safety conferences, it brings mining safety experts together about once every two years.

The nature of mining safety research is changing. While research institutes still exist, research is also carried out by other bodies such as universities, consultancies and even in-house teams within mining companies and mines. This is the first time the conference comes to Canada, a country with a robust mining history of its own.

Sudbury, Canada

Canada is the second largest country in the world, covering 10 million square kilometers. Its population of 35 million clusters along its border with the United States. A significant player in the world of mining that has made great strides in reducing the industry's environmental impacts, Canada employs 418,000 workers in mining and mineral processing.

Sudbury, home to 160,000, was founded in 1883 as a mining centre. The city's mining companies employ approximately 6,000 people and support a 300-company mining supply and service sector cluster that employs a further 10,000. Surrounded by lakes, forests, and woodlands, the region has diversified its economy becoming a major retail, finance, health, and education hub. The area's Franco-Ontarian population adds a unique flavour to the arts and culture scene.
